RESEARCH EXPERIENCE

Undergraduate Researcher

Innovative Design & Integrated Manufacturing Lab, Seoul National University .... Feb. 2021 – May. 2022

- Developed wearable piezoelectric strain sensor applying kirigami-cut to PVDF film

- Developed the enhanced stretchable piezoelectric energy harvester using topological and thermal depolarization

- Developed piezoelectric output simulator to deformation, based on piezoelectric coefficient(e_{ij})-strain curve of kirigami-cut PVDF film.

- Devised and fabricated applications – glove: VR piano, smart lens, wrist motion detector

Biorobotics Lab, Seoul National University .... Jan. 2022 –

- Developing human-in-the-loop – design parameter set system to customize hand rehabilitation glove using impedance control of multiple tendons

- Developed stiffness profile generating pulley using variable radius helix and constant torque spring

Independent Study

Undergraduate Independent Study (UIS) 1, 2, Seoul National University .... Mar. 2022 –

- Devised locomotion mechanism based on grappling hooks with monkey-inspired swinging motion for more efficient robot locomotion on challenging environments

- Permitted as the only team to take the course UIS 2, university-wide
